How to use this manual

This brochure provides information on the subject of tires for all tire brands from Continental (if available in the sizes indicated).

We do not assume any liability for the permissibility and approval of the tyres mentioned in this brochure for a specific vehicle type. These requirements must be checked by the user himself. In particular, the conditions and instructions of the technical inspection authorities, the vehicle manufacturer, the wheel and tyre manufacturers must be observed.
The air filling pressure values recommended in this brochure apply only to cold tyres. They are specified according to front and rear axle (① / ②) and according to the load on the vehicle (partial/full load). The full-load air pressure values given also apply to partial loads at speeds above 160 km/h.

Please note the following information when retrofitting to winter tyres:

For technical reasons, only certain tyre sizes are recommended for winter conversion on some vehicle models. These sizes may differ from the standard summer tyre sizes. The information in the vehicle registration documents is decisive for winter tyres. In the case of conversion, legal requirements and instructions from technical test centres, the vehicle manufacturer and the wheel and tyre manufacturers must be observed.

A combination of summer and winter tyres on passenger cars is not recommended.

Winter tyres have to meet special requirements.
The suitability for winter use significantly depends on the tyres' tread depth. The legal minimum tread depth is 1,6 mm. Continental recommends to check the tyres regularly, to reduce speed on wet roads and to consider replacing the tyres in good time.

Optimum winter safety can only be achieved with genuine winter tyres all round (4x).

The technical data contained in this publication is licensed from LIZEO GROUP ("LIZEO"). The property of and copyrights in such data remain with LIZEO and/or its group companies. Continental does not make, and expressly disclaims, any representation or warranty (express or implied) as to the data being accurate, complete or up-to-date. Passenger- and SUV Summer tyres

SportContact™ 7

For sports and high-performance vehicles

- Gives you confidence with safe and stable driving behaviour on wet and dry surfaces
- A perfect interplay of extra-soft BlackChili compound and extra-stiff pattern for long-lasting, next-level driving pleasure
- Tailor-made for different vehicle classes to give you the typical SportContact™ feeling
- Asymmetrical non-directional tread patterng

Tyre dimensions

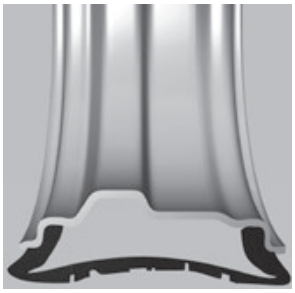
Tyre technology by Continental

The SSR tyres from Continental and Uniroyal – advanced runflat technology.

- Reduced danger and hassle
- Drive to safety for up to 80 km (50 miles) of 80 km/h (50 mph)
- Compatible with standard wheel rims (H 2)
- No need for a spare wheel and jack

The secret of SSR

Continental's SSR tyres use reinforced sidewalls to support the vehicle in the event of a loss of air pressure. SSR technology prevents the side of the flat tyre from being crushed between the road and wheel rim.



Standard tyres

The deflated tyre gets trapped beneath the rim and is destroyed

SSR runflat tyres

The stable sidewalls support the tyre if it loses air

Increased safety thanks to reinforced sidewalls

SSR tyres allow for a controlled continuation of your journey at a reduced speed of up to a distance of 80 km at a maximum speed of 80 km/h depending on the condition of the roads, the condition of the tyre and the weight of the vehicle.

Communication between tyre and driver

As SSR tyres offer a very high standard of driving comfort, the driver will barely notice any loss of pressure in the tyre. For this reason, Continental SSR tyres may only be used on vehicles equipped with a tyre pressure monitoring system, which will display the drop in tyre pressure on the dashbord instrument panel.

Note:

SSR tyres may only be fitted on vehicles for which they are approved by the vehicle manufacturer and that are equipped with a tyre pressure monitoring system.

The tread patterns and sizes available as SSR runflat tyre can be found in the current product range of summer and winter passenger tyres.

As a dealer, you need to get a dedicated training and certification for the professional mounting and removal of SSR tyres:

- Please log in under www.conti-ssr.com (via Google or Microsoft Edge).
- Select your language and register for a new account (or log in with your username and password).
- You will receive a confirmation mail containing a link for the E-learning.
- Please click the button "Technology", then the trainings SSR Part 1 and 2 can be chosen.
- After the training has been completed, a certificate can be downloaded.

Tyre technology by Continental

ContiSeal™ – the self-sealing standard production tyre from Continental.

For enhanced mobility and safety, even if a foreign object penetrates the tyre tread.

ContiSeal™ tyres contain an innovative technology which seals punctures in the tread area. ContiSeal™ tyres have a sticky, viscous layer in the tread area that instantly seals punctures caused by nails and other objects up to 5 mm in diameter. The layer temporarily seals the vast majority of tyre tread punctures.

The material in the sealant layer prevents air loss even if the penetrating object becomes dislodged. As a result there is no need to stop straight away or change the tyre immediately in the event of a puncture. Despite this, the tyre should be taken as soon as possible to a tyre specialist who can examine it to determine if it needs a permanent repair.

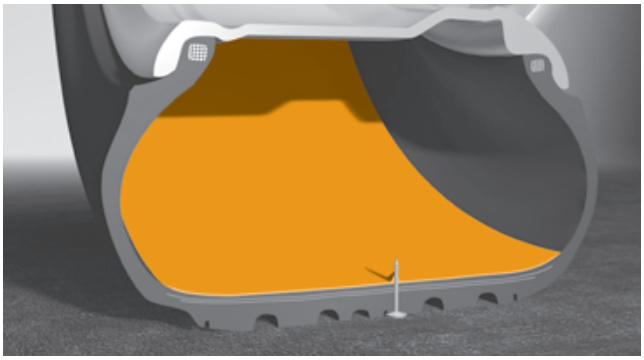
ContiSeal™ tyres are instantly recognisable by the nail symbol on the sidewall and are compatible with all commonly available wheel rims.

ContiSeal™ tyres – the benefits at a glance:

- punctures in the tread area caused by penetrating objects up to 5 mm in diameter are sealed
- holes are sealed even if the penetrating object becomes dislodged
- same high performance under normal driving conditions as non ContiSeal™ tyres
- no need to stop straight away or change the tyre

For detailed information about ContiSeal™ tyres – use, inspection, storing, mouting / demounting, repair, disposal – please see **www.contiseal.com**

You can find more details about SSR and ContiSeal in our Technical Data Book



Tyre technology by Continental

ContiSilent™ – the tyre for less interior noise.

- Reduced interior noise on all road surfaces
- ContiSilent™ functions in all weather conditions
- No change in any other driving charateristics
- No negative influence on mileage and load / speed capability
- Same mounting and storage as for standard tyres

Technical highlights

ContiSilent™ is a tyre noise-reducing technology developed by Continental. It is designed to reduce interior noise on all road surfaces. ContiSilent™ tyres are equipped with an inner tyre absorber, a polyurethane foam, attached to the inner surface of the tread area with an adhesive. Regardless of the temperature, the structure of the foam stays intact.

ContiSilent™ helps reduce interior vehicle noise up to 9 dB(A), depending on the type of vehicle, its speed and the road surface. It is available for summer and winter tyres and is compatible with all commonly available rims. Driving performance is not affected and there is no negative influence on mileage and load / speed capability. Fitting on four positions is recommended.

For further information please visit
www.continental-tires.com/car/tires/continental-tire-technologies/contisilent

Standard tyre

VS

ContiSilent™ tyre

ContiSilent™ principle

A ContiSilent™ tyre contains a polyurethane foam. It is firmly attached to an adhesive layer on the inner surface of the tyre tread area.

ContiSilent™ tyre.

Comments: Possible conversion sizes based on the same rolling circumference (distance travelled per revolution of the wheel) are given in the tables on pages 234 to 243, which contain information on which alternative tyre sizes may be possible for a given base tyre.

Tyre sizes in adjacent rows usually have the same or similar rolling circumference. The smallest possible deviations in the rolling circumference in the case of alternative tyre sizes are important for the vehicle‘s electronic control systems, transmission and speedometer. The specified rolling circumferences are rounded standard dimensions (with a tolerance of -2,5 % / +1,5 %).

For information about which tyres are permitted for your vehicle, please refer to the vehicle registration document/EC certificate of conformity - CoC.

In case of conversions requirements and instructions from the technical test centres, the vehicle manufacturer, the wheel and tyre manufacturers must be observed. In any case, the clearance of the wheel and a sufficient load capacity of the tyre must be guaranteed.
